

MASSACHUSETTS POWER INFORMATION DISCLOSURE LABEL Q2 2022 – ARLINGTON COMMUNITY ELECTRICITY AGGREGATION PROGRAM

GENERATION PRICE

Average price per kWh at different levels of use.
 Prices do not include regulated charges for customer service and delivery.

The price you pay for generation is set forth in the town aggregation agreement of Arlington and Direct Energy Services, LLC. If you have any further questions about what you pay for electricity per kWh, please contact the Direct Energy Services, LLC customer service number below. The generation price will not vary based on the amount of electricity the customer uses.

CUSTOMER SUPPORT CONTRACT

Contact the Town's consultants at 1-800-680-9180.

Program Generation Price	Standard Offering - Local Green	Local Greenest Optional	Local Greener Optional	Basic Optional	Period
Standard/Optional Rate Customers	11.029 ¢/kWh	13.699 ¢/kWh	12.199 ¢/kWh	10.699 ¢/kWh	12/2019 – 11/2022

Direct Energy Services, LLC (Town's electric supplier)

2021	Municipal Solid Waste	0.65
2021	Natural Gas	46.26
2021	Nuclear	24.92
2021	Oil	4.93
2021	Solar Photovoltaic	5.05
2021	Solar Thermal	0.00
2021	Trash-to-Energy	2.27
2021	Wind	3.40
2021	Wood	1.05
	Total	100.00

*Demand for electricity from all enrolled Arlington Community Electricity Aggregation Basic customers supplied by Direct Energy Services, LLC ("DES") for the period of 01/01/2021 through 12/31/2021 was met by the generating resources or fuel types noted above had some variation or equating to 49% and minimum 51% state RPS requirements. Arlington Local Green, Arlington Local Greener, and Arlington Local Greenest customers also had some variation derived from generating resources above.

NOTES: 1. Electricity customers in New England are served by an integrated power grid, not particular generating units. The above information is on generating units under contract to DES in the period 01/01/2021 – 12/31/2021.
 2. You may also call DES at 1-866-968-8065 or the Massachusetts Division of Energy Resources at 1-617-626-7300

AIR EMISSIONS

Emissions for each of the following pollutants are based on System Mix data by the New England Power Pool (NEPOOL) and ISO New England for the most current data reporting period.

Emission Type	Lbs. per MWh
Nitrogen Oxides (NO _x)	0.66
Sulfur Dioxide (SO ₂)	0.38
Carbon Dioxide (CO ₂)	738.15

LABOR INFORMATION

REGIONAL AVERAGE GENERATION RESOURCE LABOR CHARACTERISTICS

January 1, through December 31, 2019, Provided by ISO New England Inc.

Generating Workforce	Output (MWh)	%
Collective Bargaining	28,669,554	24%
Non-Collective Bargaining	90,567,446	76%
Total	119,237,000	100%

GENERATION PRICE CONTRACT

Generation prices do not include regulated charges for customer service and delivery. Those charges are billed by your local distribution company.

POWER SOURCES

The electricity you consume comes from the New England power grid, which receives power from a variety of power plants and transmits the power throughout the region as needed to meet the requirements of all customers in New England. When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Known Resources include resources that are owned by, or under contract to, the supplier. System Power represents power purchased in the regional electricity market. Biomass refers to power plants that are fueled by wood or other plant matter. Hydro resources of greater than 30 megawatts in size are deemed "large hydro." All other hydro resources are deemed "small hydro." Other Renewables include fuel cells utilizing renewable fuel sources, landfill gas and ocean thermal.

EMISSIONS

Emissions for each of the following pollutants are presented as a percent of the regional average emission rate. Arrows represent, for each pollutant, the emission rate from a hypothetical new generation facility.

- Carbon Dioxide (CO₂) is released when fossil fuels (e.g., coal, oil and natural gas) are burned. Carbon dioxide, a greenhouse gas, is a major contributor to global warming.
- Nitrogen Oxides (NO_x) form when fossil fuels and biomass are burned at high temperatures. They contribute to acid rain and ground-level ozone (or smog) and may cause respiratory illness in children with frequent high-level exposure. NO_x also contribute to oxygen deprivation of lakes and coastal waters, which is destructive to fish and other animal life.
- Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned, primarily coal and oil. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. SO₂ combines with water and oxygen in the atmosphere to form acid rain, which raises the acid level of lakes and streams, and accelerates the decay of buildings and monuments.

LABOR DATA

The information on this label regarding whether generators or suppliers operate under collective bargaining agreements is provided to inform you about whether the energy was produced in plants where employee wages and working conditions are mutually determined by employees and management and protected by union contracts. The information on this label regarding the use of replacement employees during a labor dispute is provided to inform you of whether a generator or supplier during a strike by or lockout of its employees has replaced them with other workers.

RENEWABLE ENERGY CONTENT

** New Renewable energy projects are those projects that came into commercial operation after January 1, 1998.
